

Paulina Modlitba

Paulina Modlitba, born on December, 9, 1980, is an enrolled, active student of good standing at the 4.5-year M.Sc. program in Media Technology and Graphic Arts at the Royal Institute of Technology (KTH), Stockholm, Sweden. I am the responsible director of this study program.

The study program in Media Technology and Graphic Arts provides a broad multidisciplinary curriculum, encompassing basic mathematics, physics, computer science and engineering courses in addition to focused courses in the technology of static, dynamic and interactive media. The program also includes mandatory courses in communication, design, cognition, economy, business development, law, project management, etc. During the final years, each student selects a major and a minor in-depth course block. The main alternatives are interactive media, audio engineering, journalism, video/film, printed communication, human-computer interaction, IT and organization, and communication systems.

Paulina has performed very well as a student and is now in the final phase of her studies, completing her M.Sc. thesis project as a visiting student at the Massachusetts Institute of Technology.

Paulina Modlitba is a gifted, ambitious, and energetic student who has successfully internalized a multidisciplinary view on media engineering. She has also been very active during her study years in student's union and extracurricular activities. She also has very good social skills.

I sincerely recommend her for further academic studies.

Stockholm, November 30, 2005
