

ROYAL INSTITUTE
OF TECHNOLOGY

Stockholm, 2005-11-24

To Whom It May Concern:

it is a pleasure to provide this letter of recommendation for Paulina Modlitba.

I know her from two courses that I teach myself, from her results on other courses at our department, and also from numerous meetings on the programme committee for Media Technology at KTH. Ms Modlitba has consistently been among the very top students, combining energy and competence with enthusiasm in the courses, yet still finding time for extra-curricular activities and for active contributions to the ongoing development of her undergraduate program. This program aims to provide a wider scope of topics than is usual for our engineering programs, in the belief that media engineers must have knowledge also of content and form. She chose to major in Sound, a topic for which I am responsible, and I was very pleased that she did. Ms Modlitba achieved the highest grade in all courses that she took: Sound Perception, Audio Technology, Speech Technology and Musical Communication with Music Technology, and her project assignment work was always very good indeed. To my knowledge she has done very well in other areas as well. I remain available for any additional inquiries.

I am confident that Paulina Modlitba would be a talented, dedicated and creative participant in any Media-related Master's program, and I whole-heartedly support her application.

Sincerely,

Sten Ternström

Professor of Music Acoustics with a specialisation in Voice Acoustics
