                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This MIT Media Laboratory project was sponsored by the Defense Advanced Research Projects Agency, Grant No. MOA972-99-1-0012. If it is not RAD_PKT_LEADER,
[3] Read in a series of segments. Each segment :
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Read in a series of segments. Each segment starts with a byte count, followed by that many bytes of data. The subsequent byte is the byte count for the next segment. A byte count of zero terminates the chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  after a sync header.

```

Time is measured by reading the internal real time clock and adding an offset to it to form "local time." Adjustments to the clock are made by modifying the offset, not by resetting the real time clock.

Local time has a resolution of 1/128 seconds (determined by the real time clock hardware), and rolls over once every 60 seconds, or 7680 tics (where 1 tic = 1/128 second). Thus a "VIRTUAL_DAY" is defined as 7860 tics.

When a ping packet is received from a neighbor, the remote time is compared against the local time. If the remote time is "greater than" the local time, then the local clock is advanced. Similarly, if the remote time is "less than" the local time, the local clock is retarded.

Since time rolls over once every VIRTUAL_DAY, the meaning of "greater than" and "less than" must be considered carefully. In particular, define:

```
err = MOD(remote-local, VIRTUAL_DAY).
```

If err is less than VIRTUAL_DAY/2, then the remote time is ahead of the local time by err units. If err is greater than VIRTUAL_DAY/2, then local time is ahead by (VIRTUAL_DAY-err) units. Note that if err exactly equals VIRTUAL_DAY/2, then it's undefined as to which is

ahead.

The algorithm here is designed to set local time to an equally weighted average between remote time and local time, so if err is less than VIRTUAL_DAY/2, local time is advanced by err/2. If err is greater than VIRTUAL_DAY/2, then local time will be retarded by (VIRTUAL_DAY-err)/2. Note that the division by two introduces a roundoff error in the integer arithmetic used here; the low-order "half bit" is simulated by a random dither.

```
vtime_t sync_getLocalTime() {
   // fetch the current time from the RTC (plus offset)
   unsigned char sec, hthsec;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            // send ping once every four seconds (on average)

APPENDIX C ArborNet "BART" Code Listing

Following is the ArborNet C source code that is executed by the PIC16F84 "BART" radio processor on the Constellation board. More information on the ArborNet system can be found in Chapter 7.

File: bart.h

```
#define _BART_H

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This MIT Media Laboratory project was sponsored by the Defense                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Copyright 2001 by the Massachusetts                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description: very efficient and dangerous fifo routines
